

Model Development Phase Template

Date	10 July 2024
Team ID	739916
Project Title	Predicting the Compressive Strength of Concrete
Maximum Marks	4 Marks

Initial Model Training Code, Model Validation and Evaluation Report

The initial model training code will be showcased in the future through a screenshot. The model validation and evaluation report will include classification reports, accuracy, and confusion matrices for multiple models, presented through respective screenshots.

Initial Model Training Code:

Paste the screenshot of the model training code

```
x_train,x_test,y_train,y_test=train_test_split(x,y,test_size=0.2,random_state=42)
```

```
from sklearn.linear_model import LinearRegression
```

```
lr = LinearRegression()
lr.fit(x_train, y_train)
```

```
▼ LinearRegression
LinearRegression()
```

```
lr.score(x_train,y_train)
lr.score(x_test,y_test)
```

```
from sklearn.ensemble import GradientBoostingRegressor
```

```
from sklearn.model_selection import train_test_split
from sklearn.ensemble import GradientBoostingRegressor
cols = df.columns.drop('Concrete compressive strength')
x = df[cols]
y = df['Concrete compressive strength']

x_train, x_test, y_train, y_test = train_test_split(x, y, test_size=0.2, random_state=42)

# Initialize the GradientBoostingRegressor
gbr_model = GradientBoostingRegressor() # Use a different variable name
gbr_model.fit(x_train, y_train)
```
